Executive Summary

Climate change and global warming are a reality and in response to this, environmental legislation in South Africa is becoming increasingly stringent. South Africa ranks amongst the top 20 countries emitting the most greenhouse gases in the world, with the mining, manufacturing and agricultural industries being the biggest contributors.

There is a growing concern that, through the emission of methane gas from organic waste that is disposed in landfills, South African municipalities are contributing to the emission of greenhouse gases. On top of that, South Africa is fast running out of air space for the development of more landfills.

Economies of the world are in distress, South Africa is not immune to this situation. With increasing cost of living people are looking for affordable high quality basic goods.

Ben Peta Investment Holdings (Pty) Ltd was established to offer technical and cost effective solutions to the problems arising from these developments.

We divert industrial waste from landfill into raw materials for new processes, supply onsite wastewater treatment plants to reuse treated effluent and manufacture our own detergents using some waste streams.

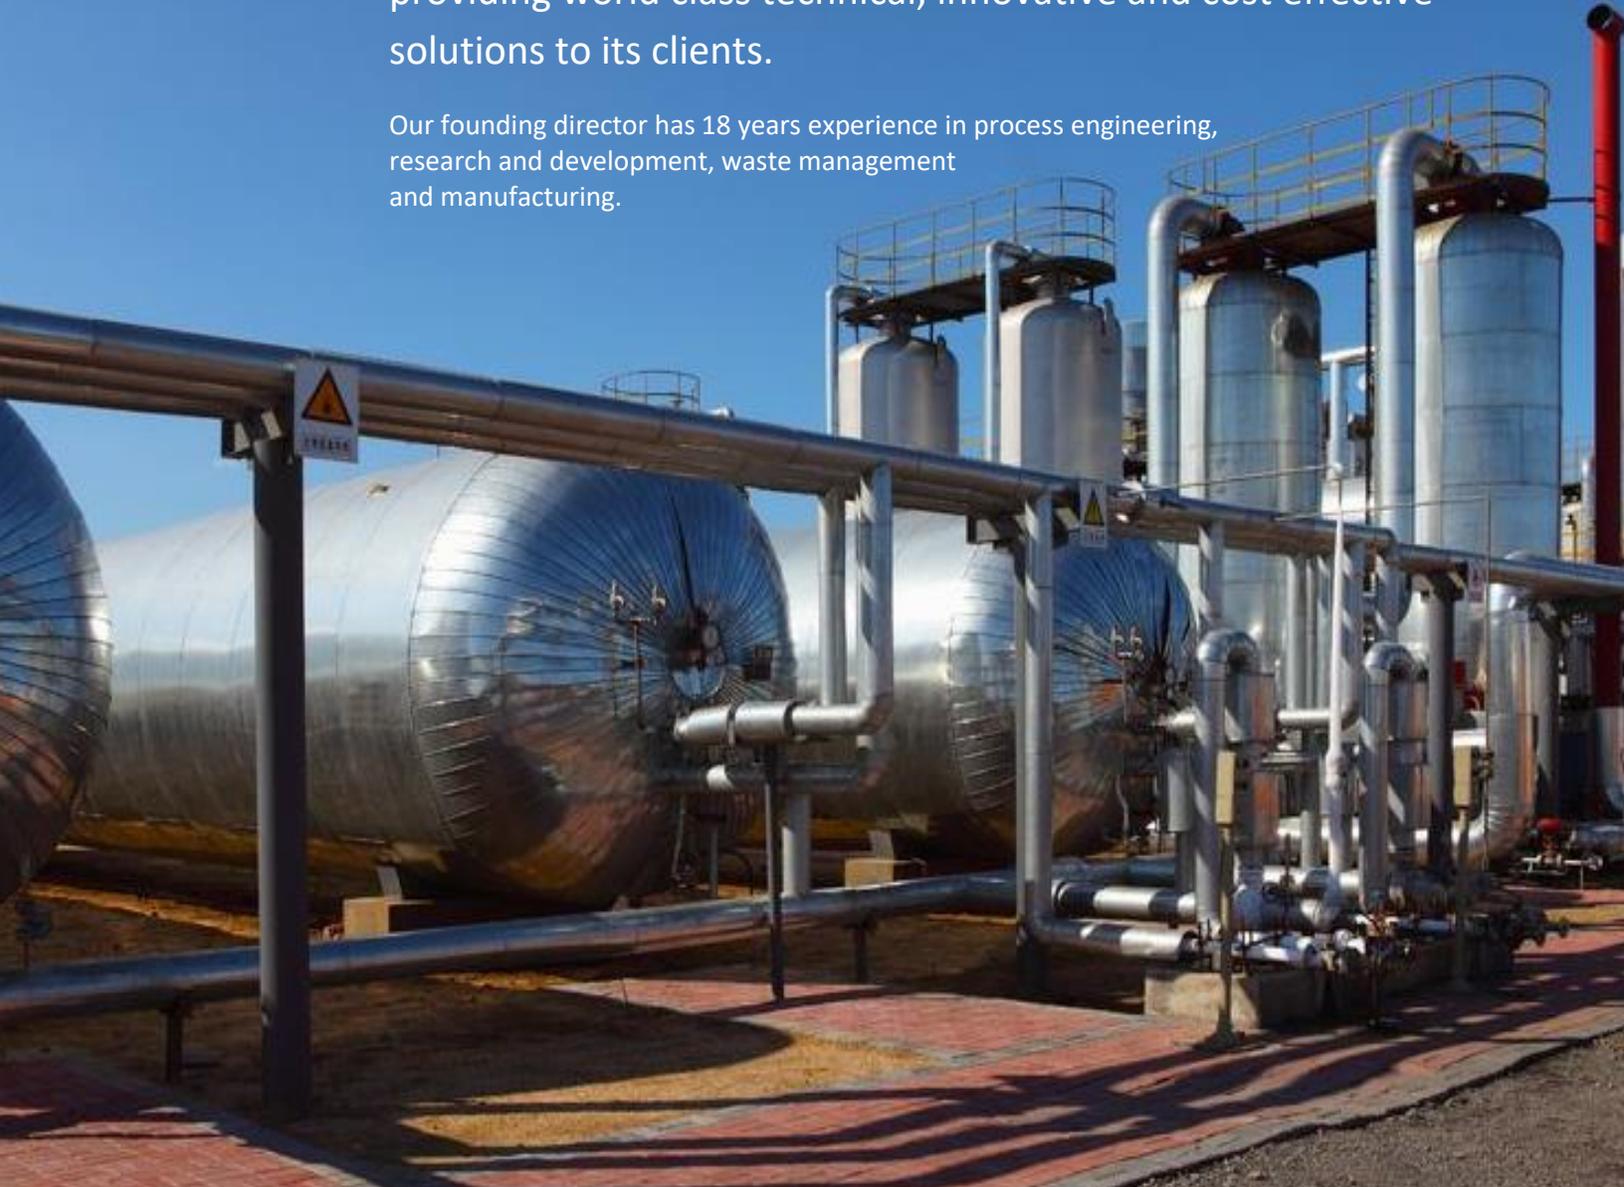

Our services are designed to give good customer experience. To ensure excellent delivery on projects, strategic partnerships with relevant professional bodies and research institutions have been established. We believe and implement principles Circular Economy and Expanded Producer Responsibility.

Business Overview

Ben Peta Holdings is a sustainable solutions based business providing world class technical, innovative and cost effective solutions to its clients.

Our founding director has 18 years experience in process engineering, research and development, waste management and manufacturing.

Our Vision

To lead decentralised production of basic goods
and provision of services revolution

Our Mission

Solve real life problems using science and technology.
Empowering young people in our areas of operation

Our Values

Innovation
Sustainability
Partnership
Community

Our Offering

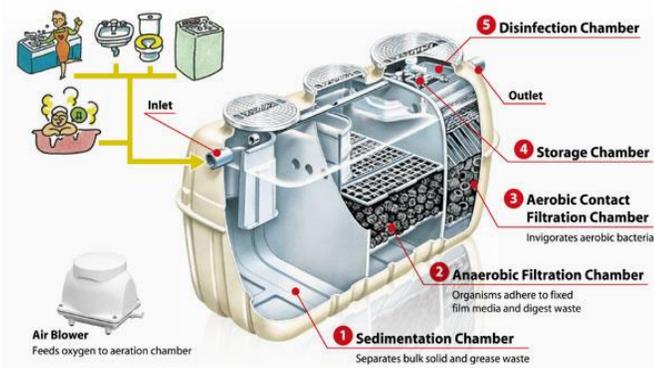

Waste reuse division

Divert waste from landfill - value is extracted from waste for reuse as a raw material in other processes. With our modus operandi our clients save on landfill disposal cost and improve their carbon footprint.

What is the biggest headache you have from waste going to landfill either by cost or volume? This is the question we ask when meeting a potential client for the first time. Analysis of that waste stream is done at risk, using our own costs until a solution/its new home is found

Wastewater reuse – we are part of a network that has built more than 250 onsite wastewater treatment plants in 9 countries in Africa. Traditionally wastewater treatment works discharge treated effluent as wasted water to water courses. With high levels of lack of access to water and sanitation in Africa, that is a wasted resource and missed opportunity. Our onsite treatment plant treats and disinfects wastewater for reuse in non-potable water applications, such as flushing toilets and irrigation.

Manufacturing division

High quality detergents are produced with more attention given to quality other than fancy packaging. To save the planet and save costs, packaging return for reuse is encouraged. The cost saving is then passed on to our clients

Our product range includes, but not limited: bleach, colours bleach, dish wash, fabric softener, hand wash, handy clean, pine gel, thick bleach, sanitizer and washing powder. Specialised cleaning chemicals are manufactured on request.

Our brand

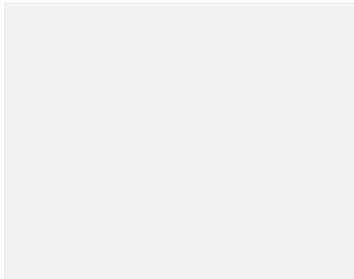

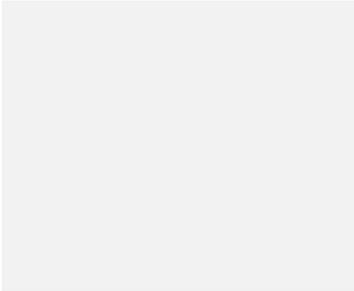

Ikhwezi is the star that shines the brightest in the morning, even in the evening when it is time to milk the cows the same star shines the brightest and it is called Ucel' izapholo.

Our choice of this brand name signifies our quest to shine our little light not just on surfaces that our products keep clean, but also in the communities where we operate.
